Easy Phone System Management

- Configure Kerio Operator from your desktop—or a tablet—with the simple and intuitive administration interface.

- Stay in control of all your appliances from anywhere using MyKerio. Manage multiple Kerio Operator deployments through a complimentary centralized web interface providing consolidated system information, automatic configuration backup, status monitoring, system notifications and complete remote configuration.

- Automatically configure a wide variety of phone brands and models on the network with auto-provisioning.

- Schedule automatic server backups of configuration files, system and call history logs, voicemail and recorded call data and provisioning files to MyKerio or an FTP server.

Business Phone Capabilities Users Love

- Kerio Operator Softphone lets you make and receive voice and video calls, listen to voicemail, set up call forwarding, and check call history -- anytime, anywhere using only your computer.

- Make and receive office calls on your Apple iOS or Android mobile devices using the Kerio Operator Softphone mobile app.

- Initiate calls from your desk phone or phone app simply by clicking on a phone number in Kerio Connect or a web browser.

- Make calls, access contract records and log calls in Salesforce.

- Improve meeting efficiency with video calls, providing a face-to-face meeting experience.

- Provide in-demand features including automatic voice to email, call forwarding, call pickup and parking, conference calling, paging, fax support and more.

Enjoy Substantially Reduced Operating Costs

- Administer your phone system easily without requiring specialized—and often expensive—phone technicians.

- Reduce management overhead dramatically with the Kerio Operator interface and rapid system setup.

- Lower your monthly expenses by leveraging the inherent low cost of VoIP and IP-based telephony.

Protect Your Phone System with Uncompromising Security

- Repel phone system hackers, prevent misuse and ensure the privacy of your users with advanced security technologies such as call encryption.

- Protect against password guessing, detect anomalous behavior and prevent break-in attempts through continuous monitoring.

- Ensure that system services are restricted to trusted devices inside the network through a built-in firewall.

Deploy Rapidly in Any IT Environment

- Avoid the headaches caused by conflicting applications and vulnerable system services by deploying the Kerio Operator software appliance – a bare metal installation on the hardware of your choice.

- Integrate the Kerio Operator virtual appliance, pre-configured with Kerio Operator software and a hardened OS, into your VMware environment and share the same hardware as other applications.

- Leverage Kerio Operator's product features with a Kerio Operator hardware appliance, a stable, solid-state appliance that is pre-configured with Kerio Operator software and a hardened OS.

- Choose Kerio Cloud Voice and skip managing a server altogether
